ENGINEERED FOR MOTION

MS Sedco Introduces WORLD'S FIRST Touchless Wireless Switch

MS Sedco is pleased to introduce the 216TX, which combines all the versatility of wireless with the hygienic and anti-microbial benefits of a touchless switch. The 216TX ships complete in a 1020 surface box with the transmitter included.

The 216TX features all the benefits associated with MS Sedco's ClearPath™ line of wireless products: field-selectable frequencies, a minimum of 1-second transmission time, and a two-piece surface box which allows for easy access to the battery. Like the standard 216, the maximum range for hands free detection of the 216TX is adjustable.

The 216TX allows end users replacing hard-wired traditional touch switches with touchless switches to make this upgrade without having to pull additional wires to each switch.

How to order:

Specify 216TX
Specify Face Plate by adding
-TG, -WT, -HT or -HG
(Example: 216TX-WT)

Retail pricing is \$295

Updated 6/28/2010

Frequently-Asked Questions:

What type of battery does the 216TX use?

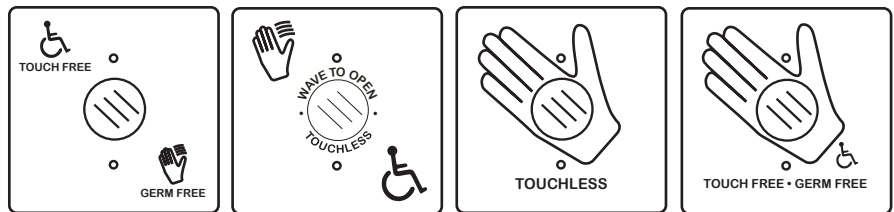

How often should I change it?

The 216TX utilizes two batteries – a coin cell (CR2032) battery powers the touchless portion, and a standard 9-volt battery powers the wireless portion. Both are easily accessible. MS Sedco recommends changing the batteries every six months.

What receivers will interface with the 216TX?

The 216TX features field-selectable frequencies at 300 MHz, 390 MHz, and MS Sedco's HDRC. It is compatible with all MS Sedco ClearPath™ receivers, as well as other receivers that operate at 300 or 390 MHz with dipswitch security settings.
