Product Description**BASIC USE**

The 730 Series heavy duty keyswitches are a reliable and economical way to momentarily activate or turn on and off low voltage electrical devices.

When used with automatic doors, the 730 series keyswitches can be used to turn an operator or any activation device on and off. They are also a simple way to provide secure activation of any automatic door.

The 730 series keyswitches are available with either a momentary or maintained contact switch and a choice of three different size stainless steel face plates. The integral lock cylinder cover includes a switch activator dead stop and protects against wires becoming tangled in the lock mechanism.
